3+ years with Python • Advanced English • Bachelor's degree

Experience

iTechArt Group
Python Developer
October 2021 - November 2021 (2 months)

It was a short but productive collaboration where in the 1st project I added
SSO to the Django admin site, plus increased the test coverage with pytest
and Selenium. In the 2nd project, I went through the entire list of dependencies
to identify and fix security vulnerabilities. Finally, in the 3rd project, I analysed
the back-end of the web application and gave recommendations on how to
improve its scalability and maintainability.

Mapbox
Map Data Validator
September 2019 - August 2021 (2 years)

I validated incoming edits from OpenStreetMap while maintaining SLA our
team was responsible for and occasionally contributed to the OSM myself.
Beyond that, I helped with short-term subtasks, now and then wrote GitHub
tickets and participated in humanitarian mapping activities, such as during the
flood in Japan in 2020.

Zorka.Mobi
Digital Media Planner
December 2018 - April 2019 (5 months)

Here I developed a model for predicting mobile app campaigns (Facebook,
Instagram, Google, myTarget, In-App, Video Networks, VK, Snapchat, Twitter)
and wrote a CLI tool with Python to automate these estimations.

Kingmarket
Digital Marketing Manager
June 2017 - October 2018 (1 year 5 months)

Besides promoting and developing the e-commerce business, I worked a lot on website design to improve UI/UX, not to mention quite an extensive communication with website developer, customer service of the hosting provider and other parties. Finally, I created bots to automate bid management on 2 key ad platforms using Python and Selenium.

Jakov & Co.
Marketing Manager
May 2014 - April 2017 (3 years)

In this business endeavour (a custom-made furniture with an online-first approach) I introduced and later evolved a growth strategy based on SWOT analysis, searched for local and foreign partners, tested hypotheses about customer segments, assortment, price positioning, contract manufacturing and outsourcing possibilities. I also created first website on Wix and then the second one on WordPress. In addition to promoting via multiple ad channels, I wrote articles, optimised tags, texts and load speed following the best practices of white hat SEO with decisions backed by data from Google Analytics. Essentially, all the activities were related to the 7Ps of marketing mix.

ZIKO
Brand Manager
April 2013 - March 2014 (1 year)

As a representative of watch brands, I kept statistics per SKU with allocation of ABC and XYZ groups by sales in dollars and pieces, managed procurements according to the budget and distributed watches across the retail chain (mostly watches and jewellery), assessed knowledge of the shops staff and conducted training sessions for them, as well as collaborated with marketing department and HQs of the brands abroad.

Silverado
Category Manager
October 2012 - March 2013 (6 months)

I organized procurement and following distribution of goods to the company's electronics shops, searched for new suppliers and renegotiated the terms of existing contracts, conducted a market analysis and optimized warehouse stocks.
